

Name _____

My Rotting Log

I found these producers.....

I found these primary consumers.....

Food Chain Vocabulary

Producers- Use sun light, carbon dioxide, air and water to produce their own food (plants)

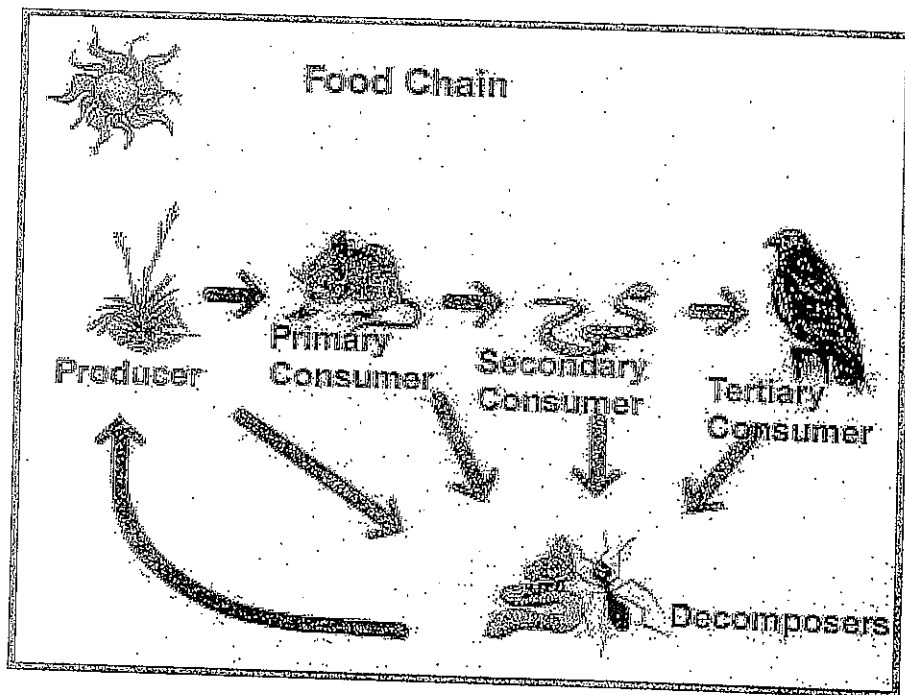

Primary Consumers- Obtain their energy by eating producers (herbivores); Examples of primary consumers for a rotting log- fungi and bacteria, bark beetles, click beetles, wood borers, carpenter ants, termites

Secondary Consumers – Obtain their energy by eating primary consumers; Examples of secondary consumers for a rotting log- centipedes, daddy-longlegs, wolf spiders, mites, ants, salamanders, woodpeckers

Tertiary Consumers – Obtain their energy by eating secondary consumers; Examples- hawks, owls, raccoons, skunks, and foxes

Scavengers- Consume dead plants, animals, or carrion; break down organic materials into small particles; Examples of scavengers for a rotting log- millipedes, pill bugs, wood roaches, snails, earth worms, mites and slugs

Decomposers- Break down the small particles produced by scavengers; release nutrients back into the soil; Examples of decomposers for a rotting log- bacteria, fungi, insects, earth worms and some snails

I found these secondary consumers.....

I found these tertiary consumers.....

I found these scavengers and decomposers.....
